

ISSF CONSERVATION MEASURE 1.3

REDUCTION OF ANNUAL SOURCING OF INDIAN ORIGIN YELLOWFIN BY 11% CALCULATED WITH RESPECT TO THE COMPANY'S AVERAGE ANNUAL LEVEL OF INDIAN OCEAN YELLOWFIN PURCHASE FROM 2017-2019.

SAPMER which only source from its fleet catches covers Conservation Measure 1.3 thanks to:

- **A catch reduction** of Indian Ocean yellowfin tuna performed by a strict compliance of its fleet to the catch reduction percentages set for its EU-France and Mauritian flagged vessels under resolution 21/01 following resolution 16/01, 17/01 18/01 and 19/01 and a strict respect of the consumption of quotas allocated in that regard
- **A fleet reduction** of 2 purse seiners performed in 2021

The combined effects of the above lead to a sourcing reduction far beyond 11% with respect to the company average annual level of Indian ocean yellowfin sourcing from 2017-2019.
